

# Resuscitator2000<sup>®</sup>

Breathing life into century-terminated software

**PATENTED**  
Patent No. 5,600,836

## Lowest Cost

Typically one-third to one-half less expensive than the not-so-clever field expansion or windowing approaches. No tools to buy. Supplemental hardware not required for your site... the work is done on our machine.

## Highest Quality

Non-intrusive repair methodology requires no changes to program logic or database structure... so Resuscitator2000 won't "break" your software. No user retraining. Money-back guarantee of satisfaction.

## Fastest Turnaround

Remediation phase can be completed in as little as three weeks. Patented 28-year approach substantially reduces post-remediation testing effort. Resuscitator2000 is a turn-key Y2K repair and certification testing service.

## Proven

Our proprietary O<sub>2000</sub><sup>™</sup> tools have been thoroughly tested. Deliveries are completed and/or remediation is underway at multiple sites, including several Fortune 500 companies. Recommendations are available. We have very substantial experience with BPCS<sup>™</sup> code.

## Flexible

If your software runs on an AS/400 or MVS platform, the patented 28-year approach used by Resuscitator2000 can solve your Y2K problem.

Unbeaten Path currently holds the only license to use the patented TOCS<sup>™</sup> Y2K remediation process to repair code on the AS/400 platform.

The TOCS method is covered by U.S. Patent No. 5,600,836 and other U.S. and international pending patents.
